

Commitizen

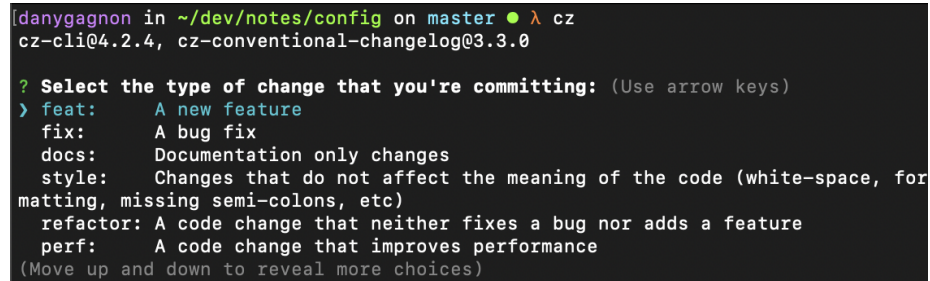

Dany Gagnon

Commitizen

Commitizen is very important to keep your commit consistent with the [Conventional Commit Guideline](#). It adds a command to the terminal.

cz

That command brings a menu to help the user commit with the angular convention.

```
[danygagnon in ~/dev/notes/config on master ●] λ cz
cz-cli@4.2.4, cz-conventional-changelog@3.3.0

? Select the type of change that you're committing: (Use arrow keys)
> feat:      A new feature
  fix:       A bug fix
  docs:      Documentation only changes
  style:     Changes that do not affect the meaning of the code (white-space, for
matting, missing semi-colons, etc)
  refactor:  A code change that neither fixes a bug nor adds a feature
  perf:     A code change that improves performance
(Move up and down to reveal more choices)
```

Figure 1: Image showing cz command in action

To install the **cz** command in a project, simply run the command -
`commitizen init cz-conventional-changelog --yarn --dev --exact`
